

CAUTION — IF YOU HAVE YOUR JOURNALS BOUND, note that the following 1986 author/subject index contains a substantial number of items referenced to the "A-" pages which always precede the serially numbered main scientific content of each issue, and which succeed the scientific pages. These references cite information of value which, by format, does not lend itself to inclusion in the main portion of the issue.

When binding a year's collection of JOURNALS, it is common practice to strip off and discard the "A-" portions of each copy. **HOWEVER, BEFORE DISCARDING 1986 "A-" PAGES — CHECK THEIR CONTENT**, either by scanning the index and retaining cited pages, or reviewing each issue and retaining those "A-" pages which may be of future value. Copies of any "A-" pages previously discarded and now needed can be obtained from University Microfilms, Intl. Complete address and telephone number information is listed on the table of contents page of this or any issue of the JOURNAL.

1986 Subject Index

A

| | |
|--|----------|
| absolute humidity, conversion to relative | 241 |
| acceptable risk, determination of | 229 |
| ACGIH report, on size-selective sampling | 443 |
| acoustic neuroma, occurrence of | 681 |
| acrylic enamel, aerosols from overspray | 411 |
| acrylonitrile, desorption by carbon disulfide | 152 |
| generating test atmospheres of | 152 |
| personal monitoring for | 152, 158 |
| thermal desorption of | 158 |
| activated carbon, desorption of organic vapors | 615 |
| for sequential sorption | 509 |
| prediction of adsorption by | 509 |
| variability in respirator cartridges | 491 |
| water effect on desorption | 615 |
| adsorption, of sequential sorbates | 509 |
| properties of activated carbon | 509 |
| aerodynamic particle size, determination of grey iron dust | 386 |
| aerodynamics, of exhaust hoods | 448 |
| aerosol monitors, for respirable dust | 354 |
| aerosol sampling, efficiency of filter cassettes | 825 |
| aerosols, distribution in chambers | 540 |
| from acrylic enamel spraying | 411 |
| from particleboard | 725 |
| from retorting oil shale | 455 |
| in swine confinement building | 404 |
| role in organic vapor exposures | 524 |
| role in styrene exposures | 524 |
| size-selective sampling of | 443 |
| temporal distribution in chambers | 540 |
| air contaminants, in offices | 207 |
| air intakes, location of | 115 |
| near exhaust outlets | 115 |
| airflow patterns, of push-pull ventilation over roofs | 369 |
| air-purifying respirators, for toluene diisocyanate | 393 |
| alcohols, toxicology of | 704 |
| Amberlite XAD-7, sorbent for amines | 41 |
| Ambersorb, sorbent for acrylonitrile | 152, 158 |
| amines, solid sorbents for | 41 |
| ammonia, determination of | 135 |
| sampling for | 135 |
| aromatic amines, from pyrolysis of polyurethanes in foundries | 621 |
| in foundries | 621 |
| arsenic, from integrated circuit manufacturing from photocopiers | 507 |
| asbestos, exposure in buildings | 497 |
| indirect exposures to | 819 |
| Industrial Hygiene perspective on | 515 |
| in exhaust of vacuum cleaners | 66 |
| 1986 Cummings lecture | 515 |
| non-occupational exposure | 497 |
| non-occupational exposures | 515 |
| perspective on litigation | 708 |
| errors in determination | (4)A-230 |
| hazard criteria | (6)A-378 |
| predictive screening test | 245 |
| sampling rate effect on determination | (4)A-230 |
| asbestos fiber counting, precision of | 259 |
| proficiency test of | 259 |
| attapuligite, NIOSH study of | 674 |
| attenuation, by hearing protectors | 195 |
| attenuation function, relating to noise reduction rating | 776 |
| standard for hearing protectors | 776 |
| averaging time, in exposure distribution | 365 |

B

| | |
|--|-----|
| bacteria, on cotton plants | 437 |
| on raw cotton trash | 421 |
| balance-transducer, for measuring tremor | 567 |

| | |
|---|----------|
| battery manufacture, controlling lead exposure | 144 |
| behavior maintenance, as control method | 785 |
| behavior training, for exposure control | 785 |
| benzene, evaluation of dosimeters | 347 |
| sorption on activated carbon | 509 |
| uptake in rats and mice | 37 |
| benzene exposures, from gasoline | 164 |
| beryllium, dust from clothing | 256 |
| indirect exposures to | 819 |
| biomechanical models, for predicting overexertion | 322 |
| bisphenol-A, from pyrolysis of epoxy paints | 399 |
| bisulfite, method for sulfur dioxide | 522 |
| black light lamps, ultraviolet hazard from | 488 |
| blood, cadmium in | 754 |
| boron, from integrated circuit manufacturing | 607 |
| breakthrough rate, permeation by solvents | 236 |
| butane, in gasoline vapors | 164, 173 |
| butyl rubber gloves, permeation by liquids | 189 |
| butylamine, coated solid sorbent | 742 |
| byssinosis, from cotton dust | 712 |
| medical surveillance for | 712 |

C

| | |
|--|----------|
| cabinet-making, formaldehyde exposures | 747 |
| wood dust exposures | 747 |
| cadmium, distribution in tissue | 754 |
| from photocopiers | 659 |
| cadmium compounds, inhalation study of | 754 |
| cadmium fume, inhalation study of | 754 |
| capture efficiency, of exhaust hoods | 448 |
| carbon disulfide, desorption of acrylonitrile | 152 |
| carbon tetrachloride, see tetrachloromethane | |
| sorption on activated carbon | 509 |
| Carbosieve B, sorbent for acrylonitrile | 152, 158 |
| carcinogens, oxidative degradation of | 360 |
| cardiovascular stress, of varied work tasks | 798 |
| cascade impactor, particle size determination with particle size distribution by | 87 |
| ceramic fiber insulation, hazard from removal of | 530 |
| ceramic fibers, biologic effects of | 717 |
| chambers, inhalation | 147 |
| chloralkali plants, mercury exposure in | 249 |
| chlorinated hydrocarbons, determination by ISO method | 27 |
| chlorine, electrochemical sensors for | 78 |
| chlorine monitoring, data-logging system | 78 |
| chloroacetone, hazard evaluation of | 375 |
| chloroform, see trichloromethane | |
| chloroformates, simultaneous determination with phosgene | 742 |
| chlorophenols, in lumber mills | 731 |
| chloroprene gloves, permeation by liquids | 189 |
| chlorosulfonated-polyethylene, gloves | 189 |
| chromatography, determination of amine vapors | 41 |
| determination of ethanolamines | 185 |
| determination of isocyanates | 181 |
| determination of monochloroacetic acid | 14 |
| high pressure liquid | 181 |
| chromium, occupational health aspects | 696 |
| chromotropic acid, determination of formaldehyde method for formaldehyde | 276 |
| method for formaldehyde | 587 |
| circadian rhythm, related to stress | 686 |
| climate control, in mobile homes | 792 |
| to mitigate formaldehyde exposures | 792 |
| clothing, dust resuspended from | 256 |
| coal dust, errors in sampling | 602 |
| improved sampling of | 602 |
| size-selective sampling of | 443 |
| coal gasification, PNA exposures from | 379 |

SUBJECT INDEX

| | |
|---|-----------|
| coal mines, improved dust sampling in | 602 |
| coconut charcoal, sorbent for acrylonitrile | 152, 158 |
| coefficient of diffusion, for diffusive sampler | 418 |
| computer, control of dustfeed | 301 |
| evaluation of postural stress | 641 |
| computer analysis, of monitoring data | 78 |
| computer chips, exposures in manufacturing | 607 |
| computerized, decision support system | 124 |
| confined spaces, standards for work in | (11)A-708 |
| ventilation of | (11)A-708 |
| consultants, listing of | (1)A-40 |
| control, of contaminants in tire manufacturing | 312 |
| cooling, personal garment for | 293 |
| corporate exposure limits, legal aspects of | 809 |
| policy and methods of | 809 |
| cost effectiveness, method to determine | 50 |
| of exposure control | 50 |
| cottage industries, indirect exposures from | 803 |
| cotton bract, fungi on | 437 |
| cotton dust, byssinosis from | 712 |
| cotton plants, bacteria on | 437 |
| endotoxins on | 437 |
| microorganisms on | 437 |
| cotton trash, differences by geographic origin | 421 |
| endotoxins on | 421 |
| gram negative bacteria on | 421 |
| Coulter Counter, particle size distribution by | 87 |
| counting, of airborne fibers | 465 |
| crystalite, in ceramic fiber insulation | 530 |
| criteria, for asbestos hazards | (6)A-378 |
| for size-selective sampling | 443 |
| crotonaldehyde, solid sorbent for | 832 |
| Cummings Award 1986, Morton Corn | 515 |
| Cummings 1985 Lecture, correction of Table I | 147 |

D

| | |
|---|-----------|
| data base, for decision support system | 124 |
| data processing, for decision support | 124 |
| data-logging, of chlorine monitoring | 78 |
| decay products, of thoron | 308 |
| decision support, computerized system for | 124 |
| degradation, of carcinogens | 360 |
| deposition, of fibers in airways | 72 |
| dermal exposures, assessing by video imaging | 764, 771 |
| fluorescent tracers for | 771 |
| desorption, of acrylonitrile | 152 |
| organic vapors from activated carbon | 615 |
| solvents from activated carbon | 615 |
| detector tubes, humidity limits for | 241 |
| diesel exhaust, risk assessment of | 1 |
| diethanolamine, also see ethanolamines | |
| diethylamine, sampling and determination in air | 41 |
| di(4-pyridyl)ethylene, for determination of ozone | 331 |
| di-n-butylamine, coated solid sorbent | 742 |
| diffusion monitor, with intermittent respirator use | (12)A-775 |
| diffusion sampler, for hydrogen sulfide | 475 |
| diffusive sampler, coefficient of diffusion for | 418 |
| effect of front membrane | 571 |
| longitudinal sorbent strip | 571 |
| mathematical model for | 418 |
| theoretical evaluation of | 571 |
| diglycidyl ether, from pyrolysis of epoxy paints | 399 |
| diisocyanates, also see isocyanates | |
| also see toluene diisocyanate | |
| dimethoxystilbene, for determination of ozone | 331 |
| dimethylamine, sampling and determination in air | 41 |
| diphenylmethane diisocyanate, also see MDI | |
| determination of | 181 |
| distribution, of exposures | 365 |
| dose response, of diesel exhaust | 1 |
| dosimeter, also see diffusive sampler | |
| also see passive dosimeters | |
| for hydrogen sulfide | 475 |

| | |
|---|-----|
| Draeger tube, accuracy for formaldehyde | 512 |
| dry bleach, enzyme exposure from | 138 |
| DuPont Pro-Tek Badge, for formaldehyde | 94 |
| dust, beryllium | 256 |
| determination of particle size distribution | 87 |
| improved sampling for coal | 602 |
| monitoring respirable | 354 |
| RDM-201 monitor for | 354 |
| resuspension from clothing | 256 |
| size-selective sampling of | 443 |
| wood from cabinet-making | 747 |
| dust hazard, in swine confinement bldg. | 404 |
| dustfeed, microprocessor control of | 301 |
| Wright | 301 |
| dynamic strength, job simulated | 288 |
| dynamic work, cardiovascular stress from | 798 |

E

| | |
|---|-----------|
| electron microscope, particle size determination with | 386 |
| electronic data processing, for industrial hygiene | 124 |
| endotoxins, on cotton plants | 437 |
| on raw cotton trash | 421 |
| enzymes, immunochemical determination of | 138 |
| workers exposed to | 138 |
| epidemiology, in risk assessment | 1 |
| epoxy paints, thermal degradation products | 399 |
| equivalent diameter, of fibers | 72 |
| ergonomics, postural stress study | 641 |
| esperase, immunochemical determination of | 138 |
| workers exposed to | 138 |
| ethanolamines, chromatographic determination of | 185 |
| sampling in air | 185 |
| ethics, professional | 67 |
| ethylamine, sampling and determination in air | 41 |
| exercise, effects using SCBA | 635 |
| wearing respirator | 176 |
| exhaust hoods, aerodynamic properties of | 448 |
| tracer gas evaluation of | 281 |
| exhaust outlets, location of | 115 |
| exposure assessment, of diesel exhaust | 1 |
| exposure chamber, aerosol distribution in | 540 |
| aerosols in multi-tiered | 540 |
| determining formaldehyde in | 505 |
| dynamic vapor generator | 347 |
| exposure control, by behavior training | 785 |
| cost-effectiveness of | 50 |
| exposure limits, for unusual work schedules | 199 |
| internal corporate | 809 |
| exposure monitoring, of intermittent respirator use | (12)A-775 |
| exposures, determining distribution of | 365 |
| monitoring variables | 229 |

F

| | |
|--|----------|
| feces, cadmium in | 754 |
| fiber counting, accuracy of | 465 |
| effects of dense deposits | 465 |
| for asbestos | 259 |
| membrane filter method | 465 |
| fiber deposition, by impaction | 72 |
| by sedimentation | 72 |
| in airways | 72 |
| fiberglass plastics, behavior training as control | 785 |
| fibers, ceramic insulation | 530 |
| motion in shear flow | 72 |
| filter cassettes, aerosol sampling efficiency | 825 |
| filters, for ozone | 659 |
| fire-fighter helmets, ventilation analysis of | 546 |
| fit testing, errors in | 106 |
| of respirators | 106 |
| fluorescent lamps, mercury exposure in | |
| manufacturing | 559 |
| fluorescent tracers, in determining dermal exposures | 764, 771 |
| in video imaging techniques | 764, 771 |

SUBJECT INDEX

| | |
|--|-----------|
| fluorinated rubber gloves, permeation by liquids | 189 |
| formaldehyde, accuracy of Draeger tube | 512 |
| chromotropic acid method for | 587 |
| control in mobile homes | 792 |
| determination at low levels | 276 |
| determination in air | (9)A-560 |
| evaluation of monitors for | 94 |
| from particleboard | 725 |
| generating known concentration | 276 |
| generator system for chambers | 505 |
| in cabinet-making | 747 |
| measurement in exposure chamber | 505 |
| mitigated by climate control | 792 |
| phenol effect on determination | 587 |
| foundries, determination of aromatic amines in | 621 |
| determination of isocyanates in | 621 |
| mutagens from casting | 578 |
| pyrolysis of polyurethanes | 621 |
| fume hood exhaust, re-entry into building | 115 |
| fume hood, modification of vertical sash | (7)A-432 |
| fumes, respiratory effect of | 670 |
| fungi, on cotton bract | 437 |
| G | |
| gas chromatography, determination of chloroformates | 742 |
| determination of phosgene | 742 |
| gasification, of coal | 379 |
| gasoline, exposures at hi-volume stations | 535 |
| gasoline vapors, monitoring exposure to | 164 |
| nephrotoxicity of | 173 |
| geokinetic retorting, of oil shale | 455 |
| gloves, permeation by liquids | 189 |
| permeation by solvent mixtures | 236 |
| glutathione peroxidase, effect of methylmercury on | 556 |
| glycols, toxicology of | 704 |
| gram negative bacteria, on cotton plants | 437 |
| on raw cotton trash | 421 |
| gravimetric sampler, for respirable dust | 354 |
| H | |
| halogenated solvents, toxicology of | 704 |
| Harris, Robert L., 1985 Smyth Lecture | 67 |
| Hatch, Theodore F., obituary | (12)A-755 |
| hazard assessment, asbestos exposure in buildings | 497 |
| for asbestos exposures | (6)A-378 |
| hearing conservation, basis for | 683 |
| value of | 681 |
| hearing loss, occupational | 681 |
| hearing protection, noise reduction ratings | 195 |
| hearing protectors, standard attenuation function of | 776 |
| heart rate, test for heat tolerance | 203 |
| heat stress, personal cooling garment | 293 |
| heat tolerance, test for | 203 |
| heatstroke, report of a fatality | (8)A-493 |
| helmet design, for fire fighters | 546 |
| Henry Smyth Lecture, at 1985 meeting | 67 |
| hexamethylene diisocyanate, determination of | 181 |
| home exposures, indirect | 819 |
| hoods, also see exhaust hoods | |
| ductless | 22 |
| modified vertical sash | (7)A-432 |
| recirculating laboratory | 22 |
| HPLC, also see high pressure liquid chromatography | |
| determination of isophorone diisocyanate | 482 |
| determining molecular weight of epoxy resins | 399 |
| humidity, conversion absolute to relative | 241 |
| vs. formaldehyde in mobile homes | 792 |
| humidity limits, for detector tubes | 241 |
| HVAC systems, comfort problems | 207 |
| health problems | 207 |
| hydrazine, oxidative degradation of | 360 |
| hydrocarbons, toxicology of | 704 |
| hydrogen fluoride, sorbent tube sampling | 219 |
| hydrogen sulfide, personal dosimeter for | 475 |

| | |
|---|----------|
| ice, use in personal cooling garment | 293 |
| immunochemical, determination of esperase | 138 |
| impaction, deposition of fibers by | 72 |
| indirect exposures, hazards from | 819 |
| industrial hygiene, information responsibilities | 67 |
| professional ethics in | 67 |
| risk assessment in | 67 |
| information needs, in industrial hygiene | 67 |
| information system, for industrial hygiene | 124 |
| inhalation chambers, design of | 147 |
| for small animals | 147 |
| inhalation exposure, to benzene | 37 |
| inhalation studies, with formaldehyde | 505 |
| insulation, ceramic fiber | 530 |
| internal limits, established by corporations | 809 |
| ion chromatography, for determination of ammonia | 135 |

SUBJECT INDEX

| | |
|--|-----------|
| physiologic response to | 249 |
| tremor in workers | 559 |
| validity of TLV | 249 |
| methyl chloroform, pyrolysis catalyzed by Cu | 427 |
| pyrolysis products of | 427 |
| see 1,1,1-trichloroethane | |
| methylamine, sampling and determination in air | 41 |
| methylmercury, effect in rat liver | 556 |
| effect on glutathione peroxidase | 556 |
| microorganisms, on cotton plants | 437 |
| microprocessor, control of dustfeed | 301 |
| milling, control in tire manufacturing | 312 |
| mines, coal dust sampling in | 602 |
| thoron progeny in | 308 |
| mixers, control in tire manufacturing | 312 |
| mobile homes, control of formaldehyde in | 792 |
| model, theory for diffusive sampler | 418 |
| modelling, predicting overexertion | 322 |
| predictive for results of spills | 214 |
| mold binders, degradation products of | 621 |
| molds, in air of swine confinement building | 404 |
| molecular sieve, for crotonaldehyde | 832 |
| monitors, evaluation for formaldehyde | 94 |
| for respirable dust | 354 |
| monitoring, data-logging system | 78 |
| for ammonia | 135 |
| for chlorine | 78 |
| lead by real-time analyzer | 779 |
| monitoring exposures, with intermittent respirator use | (12)A-775 |
| monitoring strategy, for variable exposures | 229 |
| monochloroacetic acid, determination in air | 14 |
| monochloroacetone, hazard evaluation of | 375 |
| toxicology studies of | 375 |
| monoethanolamine, also see ethanolamines | |
| Morton Corn, 1986 Cummings lecture | 515 |
| mutagenicity, of monochloroacetone | 375 |
| mutagens, from mold sand binders | 578 |
| in steel foundry | 578 |

N

| | |
|--|-----|
| nephrotoxicity, of gasoline vapors | 173 |
| nickel, Industrial Hygiene aspects of | 589 |
| Yant Memorial Lecture | 589 |
| NIOSH PAT program, asbestos fiber counting | 259 |
| nitrile rubber gloves, permeation by liquids | 189 |
| nitrogen dioxide, diffusive sampler dynamics | 418 |
| nitro-reagent, determination of isocyanates | 181 |
| nitrosamines, from degradation of hydrazine | 360 |
| N-nitrobenzyl-N-propylamine, in determination of isocyanates | 181 |
| noise, acoustic neuroma from | 681 |
| control of | 683 |
| hearing loss from | 681 |
| measurement of | 683 |
| noise reduction, accuracy of ratings | 195 |
| noise reduction rating, relating to attenuation function | 776 |
| noise spectra, effect on attenuation | 195 |
| noise spectrum, related to protector attenuation | 776 |

| service stations, exposures to gasoline vapors | 164 |
| gasoline exposures at | 535 |
| shielding, video display radiation | (1)A-8 |
| shift hours, effect of unusual | 199 |
| shiftwork, stress factor of | 686 |
| silica gel, sampling for hydrogen fluoride | 219 |
| sampling for monochloroacetic acid | 14 |
| size-selective sampling, 1985 ACGIH report | 443 |
| Smyth Lecture, at 1985 meeting | 67 |
| solid sorbent, for chloroformates | 742 |
| for phosgene | 742 |
| solid sorbents, for amine vapors | 41 |
| solid mixtures, permeation by | 236 |
| solvent vapors, also see organic vapors | 650 |
| powered syringe sampler for | 650 |
| solvents, irritation threshold | (3)A-142 |
| odor threshold of | (3)A-142 |
| permeation of gloves by | 189 |
| toxicology of | 704 |
| sorbent, for crotonaldehyde | 832 |
| sorbent tubes, sampling for hydrogen fluoride | 219 |
| sorbents, for acrylonitrile | 152 |
| for amine vapors | 41 |
| sorption, also see adsorption | |
| sorption tubes, for ethanalamines | 185 |
| spills, predicting air concentrations from | 214 |
| spotwelding, postural stress from | 641 |
| spray painting, aerosols from overspray | 411 |
| spray painting booths, efficiency of scrubbers on | 411 |
| standards, for asbestos exposures | 515 |
| for work in confined spaces | (11)A-708 |
| static work, cardiovascular stress from | 798 |
| statistical analysis, of variable exposures | 229 |
| statistical analysis, to plan sampling strategy | 655 |
| steel foundry, mutagens in | 578 |
| STEL monitoring, with passive dosimeters | 347 |
| Stokinger Lecture, Roger O. McClellan | 1 |
| storage battery, controlling lead exposure | 144 |
| stress, due to circadian rhythm | 686 |
| from working posture | 641 |
| of shiftwork | 686 |
| of varied types of work | 798 |
| styrene, aerosol exposure factor | 524 |
| behavior training as control | 785 |
| sulfur dioxide, simplified bisulfite determination | 552 |
| sulfur hexafluoride, use as tracer gas | 281 |
| swine, dust in confinement building | 404 |
| synchronous luminescence, screening for PNA | 379 |
| syringe sampler, motor-powered | 650 |

T

| | |
|---|-----|
| tanks, push-pull ventilation of | 369 |
| TDI, also see toluene diisocyanate | |
| television camera, to assess dermal exposure | 764 |
| temperature, vs. formaldehyde in mobile homes | 792 |

SUBJECT INDEX

| | |
|---|--------------------|
| Tenax-GC, sorbent for acrylonitrile | 152, 158 |
| test, for heat tolerance | 203 |
| test atmospheres, of acrylonitrile | 152 |
| tetrachloroethene, determination by ISO method | 27 |
| tetrachloroethylene, see tetrachloroethene | |
| tetrachloromethane, determination by ISO method | 27 |
| tetrachlorophenol, in lumber mills | 731 |
| thermal decomposition, of epoxy powder paint of methyl chloroform | 399, 427 |
| thermal degradation, also see pyrolysis of polyurethanes | 621 |
| thermal desorption, of acrylonitrile | 158 |
| of organic vapors | 339 |
| of passive dosimeters | 339 |
| thermal radiation, effect of pulsed modulated time-intensity vs. pain | 629, 629 |
| thermal stress, of plastics | 270 |
| thoron, in uranium mines | 308 |
| thoron progeny, electrical characteristics of measurement in air | 308, 308 |
| 3-D solubility parameter, calculation of predicting permeability by | 803, 803 |
| 3-M formaldehyde monitor, evaluation of | 94 |
| threshold, of irritation of odors | (3)A-142, (3)A-142 |
| threshold limit values, adjustment for schedules internal corporate | 199, 809 |
| tire manufacturing, control of air contaminants | 312 |
| toluene diisocyanate, air purifying respirators for determination of | 393, 181 |
| toxicity, of nickel | 589 |
| toxicology, of inorganic lead of monochloroacetone of solvents review of chromium | 700, 375, 704, 696 |
| tracer gas, evaluating exhaust hoods sulfur hexafluoride as | 281, 281 |
| tracer studies, of airflow patterns | 115 |
| tremor, effect of physical load from metallic mercury measurement in workers measuring device for | 561, 559, 561, 567 |
| trichloroethene, determination by ISO method | 27 |
| trichloromethane, determination by ISO method triethanolamine, also see ethanolamines | 27 |
| truck drivers, exposure to gasoline vapors | 164 |
| t-stilbene, for determination of ozone | 331 |

U

| | |
|---|----------|
| ultraviolet, hazard from black light video imaging by | 488, 764 |
| uranium mines, thoron progeny in | 308 |
| urea-formaldehyde, in particleboard | 725 |
| urine, cadmium in chlorophenols in | 754, 731 |

V

| | |
|--|---------------------|
| vacuum cleaners, asbestos in exhaust from | 66 |
| vapor exposure system, dynamic for dosimeters | 347 |
| vapors, control in tire manufacturing inhalation chamber for respiratory effect of | 312, 147, 670 |
| velocity contours, of exhaust hoods | 448 |
| ventilation, center push-pull evaluation for building of confined spaces | 369, 207, (11)A-708 |
| vermiculite, NIOSH study of | 674 |
| video display terminal, radiation from radiation exposure at | (1)A-8, (9)A-560 |
| video imaging, for assessing dermal exposures instruments and techniques | 764, 771, 764 |
| vinylidene chloride, from methyl chloroform pyrolysis | 427 |
| vitamin E, inhibition of methylmercury | 556 |
| Viton, 3-D solubility parameter | 803 |
| vitreous fibers, biologic effects of | 717 |
| VLF radiation, shielding from | (1)A-8 |

W

| | |
|---|----------|
| water, effect on solvent desorption | 615 |
| weight, maximum acceptable for lifting | 288 |
| weight holding, cardiovascular stress from | 798 |
| wood dust, in cabinet-making | 747 |
| wood preservatives, chlorophenols in | 731 |
| work, effects using SCBA | 635 |
| work load, effect on tremor | 561 |
| work practices, behavior training for | 785 |
| work schedule, related to health | 686 |
| work schedules, effect of unusual physiologic adjustment to | 199, 199 |
| Wright dustfeed, microprocessor control of | 301 |

X

| | |
|--|-----|
| x-ray fluorescence, real-time lead analysis by | 779 |
|--|-----|

Y

| | |
|--|-----|
| Yant Memorial Lecture, Ernest Mastromatteo | 589 |
|--|-----|
